

DC HEATING ELEMENT 600W

Application:

The 24 volt water heating element is made especially for off grid heating for: Household, boating, surfing, camping and even emergency Hypothermia treatment. Heat water for showers while driving your RV or boat. No more dangerous and expensive gas or needing a 220volt connection. With the help of latest technology Solarize provides these low voltage water heating elements to get easily off the grid. We offer exact threaded screw element with thermostat control that fits MOST standard geysers and other applications.

Brief Description:

Construction companies and Contractors, may enjoy, no more frozen water tanks.

Make hot water while you drive, campers, house, caters and wherever you felt the need of hot water.

Low voltage means NO shock hazard and no dangerous

STOP expensive and deadly Colic and save the universe

Built to last a lifetime by using latest technology and highest quality material. _

GREAT ADVANTAGE FOR DIVERSION LOADS:

Most electric hot water heaters have two element ports. One in the middle and one at the bottom of the tank. Use the Solarize element to replace the bottom 220 VAC element so you always have hot water. If your battery is keeping your water hot then the thermostat on the other 220 VAC elements will never turn on unless you run out of wind or solar power. A great diversion load for alternative energy systems!

Don't let the energy efficient 600 Watt rating fools you; These elements can easily bring water to a full boil.

GREAT ADVANTAGE FOR OTHER MANY USES

Great for campers, motor homes, toy haulers, hot food carts, catering, portable pressure washers and carpet cleaning machines, make hot water while you drive! Take a hot shower while tent camping or after surfing or scuba diving. Make emergency hot water for hypothermia or frost bite victims in the field. For cattle and livestock, keeps water troughs and stock tanks from freezing in winter. Just too many applications to mention. People have found hundreds of very beneficial and unusual uses.

WARNING: Do not run the tanks DRY with the heating element ON or it will burn up!

GREAT ADVANTAGE FOR ANIMALS AND LIVE STOCK.

NOTES FOR ANIMAL AND BASIC LIVE STOCK SAFETY

Remember NEVER to heat your animals water with a high voltage 110 Volt elements as this practice regularly kills an estimated 20,000 animals annually once the high voltage heater gets a crack in the electrical insulation material! Great for dogs, cats, horses, cattle, etc.

NOTE: Only use Low Voltage heaters like ours that run on battery power or operate from a low voltage power sources like a battery charger.

LOW VOLTAGE 6, 12, 24, 30 48 and 60 Volt heaters makes accidental electrocution impossible! Heat your water safely!

WARNING: If you run ANY of these elements dry and without water the heating element will burn out!!!!!! You MUST always have them submerged in water at ALL times when they are powered up!
